

HYCLEAN

HYCLEAN

**MINIMISES BACTERIAL
COLONISATION OF
GLASS SURFACES**

HYGIENIC AND EFFECTIVE

Low-maintenance, with the bonus that disinfectant can also be used for cleaning

HYCLEAN

Thanks to additional surface treatment, HYCLEAN from Glas Trösch is resistant to neutral cleaning agents such as aqueous soap solution and common alcohol-based glass cleaning agents (spirit). This glass is thus ideal for all storage shelves and partition areas in public areas which serve a large number of people, such as counter tops and table surfaces. However, HYCLEAN is also particularly well suited for application in wet areas such as bathrooms and toilets, swimming pools and wellness zones, changing rooms, etc. HYCLEAN is not suitable for sterile and surgical areas.

The glass is easy to clean and retains full transparency. Its long-lasting hygienic effect has been tested. Studies have shown that the number of bacterial species on the glass is reduced. So far, efficacy has been tested against the bacteria E. coli and S. aureus.

EFFICACY

Efficacy of HYCLEAN-coated glass on wet surfaces assessed after 24 hours under optimum conditions for bacterial growth (36°C, 100% RH):

S. aureus	99.99%
E. coli	100%

IN A NUTSHELL

- Aesthetics** Brilliant transparency
- Speciality** Resistant to chemical and mechanical influences
- Application** Minimises bacterial colonisation; the effect against viruses is unknown
